GETTING STARTED

Creating your clinic account

The account is created once, before anything else. The first person who registers the clinic automatically becomes its clinic administrator.

1. Open the sign-up page and enter your **clinic name** (the clinic's email and phone number are optional).
2. Then fill in **your own account**: first name, last name, email, username and password.
3. Click **“Create my clinic”**. You are signed in right away — no separate sign-in step is needed.

> Your clinic starts with a **14-day free trial**, with no payment method required. You can choose a plan from the “Subscription” screen at any time (see below).

Once your account is created, you are automatically the **clinic administrator** — the role with access to every feature, including staff and subscription management.

GETTING STARTED

Signing in

You sign in with the **email address** and password chosen when the account was created (or provided by your clinic administrator).

---

1. On the sign-in page, enter your **email address** and your **password**.
2. Click **“Sign in”**. You go straight to your dashboard.

> ⓘ Your session stays open automatically while you work. If you are inactive for **more than a week**, you are sent back to the sign-in page — simply sign in again; no data is lost.

To sign out, use the “Log out” button in the menu — like every sign-in, this action is recorded in the clinic's audit log.

Your profile photo: click your name at the top right, then “My photo”. Choose a PNG or JPEG image (2 MB maximum) and save; it replaces your initials in the header and appears in the lists.

GETTING STARTED

The dashboard

This is the first page you see after signing in. Its content adapts to your role — you only see what concerns you.

APPOINTMENTS TODAY

Number of appointments scheduled for today. Visible to receptionists, doctors and administrators.

DRAFT CONSULTATIONS AND PRESCRIPTIONS

Number of consultations and prescriptions still in draft. Visible to doctors and administrators.

UNPAID INVOICES

Number of unpaid invoices. Visible to receptionists, accountants, doctors and administrators.

TODAY'S APPOINTMENTS

The list of today's appointments, with a direct link to all appointments.

APPOINTMENTS — LAST 30 DAYS

A day-by-day chart of attended, missed and cancelled appointments, with the no-show rate. Doctors only see their own appointments.

PAYMENTS AND INVOICES — LAST 6 MONTHS

The amounts collected each month and the breakdown of invoices by status (paid, partially paid, outstanding). Accountants and administrators only.

RECENT ACTIVITY

A short summary of the latest actions in the clinic. Administrator only.

ⓘ Each chart has a **"Table"** button that shows the same figures as a table. The subscription status is now shown on the **Subscription** screen.

GETTING STARTED

Notifications

The bell at the top of the screen tells you about events that concern you directly, without waiting for an email. The red number shows how many notifications are unread.

1. Click the **bell**: your latest notifications appear, unread ones highlighted.
2. Click a notification: the related screen opens (the appointment, the lab order, the hospital stay…) and the notification is marked as read.
3. "Mark all as read" clears the counter; "View all notifications" opens the full page.

On the **Notifications** page you can show all notifications, only unread or archived ones, filter by category (appointments, laboratory, hospitalization…), search, mark as read or **archive**.

Who is notified, and about what

PATIENT ARRIVED

The appointment's doctor, as soon as the front desk checks the patient in.

NEW LAB ORDER

Lab technicians.

OUT-OF-RANGE RESULT

The ordering doctor, with **critical** priority.

RESULTS TO VALIDATE

The ordering doctor, when the laboratory has completed an order.

ADMISSION

The attending doctor and the clinic's nurses.

DISCHARGE

The front desk and accounting (nights added to an invoice).

A notification never contains medical details (diagnosis, result value…): only the screen it opens shows them, with its usual access checks. Everyone only sees their own notifications. Archived notifications are deleted after **90 days**.

FRONT DESK & APPOINTMENTS

Patients

Each patient has a single record in your clinic, with a patient ID assigned automatically.

Who can do what

ACTION	RECEPTIONIST	DOCTOR	ACCOUNTANT	ADMINISTRATOR
View the patient list	Yes	Yes	Yes	Yes
Create / edit a record	Yes	—	—	Yes
Deactivate a patient	—	—	—	Yes
Download the account statement	Yes	—	Yes	Yes

Adding a patient

1. Open **Patients**, then click “New patient”.
2. Enter first name, last name, date of birth, gender and phone. Email, blood group and national ID number are optional.
3. Click “Save”.

✓ A unique patient ID is generated automatically — there is nothing for you to enter.

Patient photo (optional): at the top of the form, “Add a photo” (PNG or JPEG, 2 MB maximum). Then tick **“The patient consents to their photo being saved”**: without this consent, the photo is not saved. The photo appears in the first column of the list; without a photo, a default image is shown.

◯ The photo is resized and stripped of its metadata (location, device). Only the roles that already see the patient record can see it, and every addition or removal is logged.

Finding, editing or deactivating a patient

1. Use the search (name, phone or patient ID) or the gender filter to find the record.
2. Click the pencil icon to edit their details, then “Save”.
3. To remove a patient from the active list, click “Deactivate” (administrator only) and confirm.

What a doctor sees

A doctor only sees **their own patients**: those with whom they have an appointment, a consultation, a prescription, a lab order or a stay for which they are the attending doctor. This applies to the patient list, search, medical records and invoices. A doctor also cannot create a medical act for any other patient.

◯ Walk-in patient: the front desk registers them and books an appointment with the doctor, who then sees them in their list.

Emergency access (doctor)

To treat urgently a patient who is not yours:

1. In the patient list, click “Emergency access”.

2 Enter the patient's exact number (e.g. PAT-2026-00012) and the reason for access (at least 10 characters).

3 Click “Open access”: the patient's record is open to you for 24 hours.

◯ Every emergency access is recorded in the audit log with its reason, and the clinic administrator is notified.

Getting a patient's account statement

Click the PDF icon next to the patient: the document lists all of their invoices and payments for the requested period and opens in a new tab, ready to print.

> Doctors cannot view a patient's account statement — this financial information is reserved for receptionists, accountants and administrators.

- Two patients cannot share the same patient ID or the same national ID number.
- A patient can never be permanently deleted — only deactivated, which can be reversed. Their history always remains available.

FRONT DESK & APPOINTMENTS

Doctors

Managing doctor records (adding, editing, deactivating) is reserved for the clinic administrator; all staff can view the list.

Adding a doctor

1. Open **Doctors**, then click "New doctor".
2. Create their login: username and password.
3. Enter their identity: first name, last name, email.
4. Enter their professional details: specialty, professional number, department (optional), phone (optional).
5. Click "Save" — the doctor's login account is created automatically, together with their record.

Photo: you can add the doctor's photo at the top of the form. Doctors can also change it themselves with "My photo". It appears in the first column of the list.

Editing or deactivating a doctor

Use the status filter (All / Active / Inactive) to find a doctor, the pencil icon to change their specialty, department or phone, and the "Deactivate" icon to take them off duty without erasing their history of past appointments and consultations.

- Two doctors in your clinic cannot share the same professional number.
- As with patients, there is no permanent deletion — only a reversible deactivation.

FRONT DESK & APPOINTMENTS

Appointments

Receptionists and administrators manage appointments for the whole clinic; each doctor manages only their own; patients can book and cancel their own appointments from their patient portal.

Booking an appointment

1. Open **Appointments**, then click “New appointment”.
2. Search for the **patient** by name, phone or patient ID.
3. Choose the **doctor** — or only the **department** —, the **date** and the **time**.
4. Enter a reason if needed, then click “Save”.

As soon as the appointment is created, the patient, the doctor and the front-desk team receive an automatic email notification, and any change or cancellation triggers a new one. With the **Professional** plan (and during the free trial), an **automatic reminder** is also sent the day before the appointment.

Department appointments (doctor rotation)

When the doctor is not known yet (on-call duty, rotation), choose only the **department**: the appointment shows “To be assigned — *department*” and every doctor in the department can see it, as well as the patient.

- **Doctor**: click “Take appointment”. The first doctor to take it gets it; it then disappears from their colleagues' lists.
- **Front desk or administrator**: the “Assign to a doctor” icon assigns the appointment, reassigns it or returns it to the department. The chosen doctor is notified.
- The “Awaiting a doctor only” box in the list shows only the appointments waiting for a doctor.

Every take-over and assignment is recorded in the audit log. A department that still has appointments to assign cannot be archived.

Following an appointment's status

Pending → Confirmed → Checked in → Completed

It can also become **Cancelled** or **No-show** at any time before it takes place.

In the list, action buttons appear depending on the appointment's status: Confirm, Edit, Mark as completed, No-show, Cancel.

Checking in a patient

1. On the day of the appointment, click “Check in” in the list.
2. A ticket number is assigned automatically.
3. Click “Print check-in slip” to open it as a PDF and print it.

- An appointment cannot be booked for a date or time that has already passed.
- The same patient or the same doctor cannot have two active appointments at the same time.
- An appointment that is Completed, Cancelled or marked No-show can no longer be edited.

- Check-in is only possible on the day of the appointment.

FRONT DESK & APPOINTMENTS

The visitor log

The log records when anyone who is not a patient being treated enters and leaves the clinic: visiting an admitted patient, companions, suppliers, contractors… It is kept by the front desk and the administrator.

Checking a visitor in

1. Open **Visitors**. The “Check a visitor in” form is at the top of the page.
2. Enter the visitor's **name**, phone (optional), **visitor type** and **purpose**.
3. If needed, enter the **person visited**: start typing to choose an admitted patient or a staff member, or type freely (for example “Pharmacy”).
4. Click “Check in”: the visitor appears under **Currently on site**.

Checking a visitor out

Under “Currently on site”, click **“Check out”** next to the visitor. Today's entries can be corrected with the pencil icon.

Browsing the history

The **History** section can be filtered by search (name, phone, purpose), visitor type and period (“From” / “To”). The administrator can export it as CSV (“Export CSV”); every export is recorded in the audit log.

- The same person cannot be checked in twice at the same time.
- For an admitted patient, the front desk only sees their name and location (department, room, bed), never the reason for their stay.
- No ID document or photo is recorded.
- A visit still open at the end of the day is closed automatically and marked **“Check-out not recorded”**.
- A visit can only be corrected on the same day and is never deleted by hand: entries are erased automatically after **1 year**.

PATIENT CARE

Consultations

Only doctors and the clinic administrator can access consultations. Receptionists never have access, not even to the chief complaint.

This confidentiality is enforced by the system itself, not just hidden on screen: the “Consultations” menu does not appear for receptionists, and any direct access is blocked.

Carrying out a consultation

1. Open **Consultations**, click “New consultation”, search for the patient and choose the date and time.
2. Enter the **chief complaint**, then “Save” — the consultation is created as a **Draft**.
3. Complete the **diagnosis** and the **treatment plan**.
4. Once these three fields are filled in, click “Mark as completed”.
5. Click “Finalize (lock)” to lock the consultation permanently (you are asked to confirm).

A finalized consultation becomes permanently **read-only** — this cannot be undone, not even by the administrator. Only finalize when everything is complete and correct.

- A consultation cannot be completed until the chief complaint, diagnosis and treatment plan are filled in.
- An appointment can only have one initial consultation — any additional visit must be created as a “follow-up visit”.

PATIENT CARE

Medical records

This is the most protected data in the application. Only doctors can view and edit it — not even the clinic administrator has access.

✓ There is nothing to create: as soon as a patient is registered for the first time, their medical record is opened automatically, empty and ready for their doctors to complete.

Updating a record

1. Open **Medical records**, find the patient, then click the record icon.
2. Enter or update **allergies**, **medical history** and **observations**.
3. Click “Save”.

- There is no delete button — a medical record is never deleted.
- Every time a doctor views a record, it is logged in the audit log with the date and the doctor's identity.

PATIENT CARE

Prescriptions

A prescription is always linked to a consultation. Only doctors and the administrator can access prescriptions.

Writing a prescription

1. Open **Prescriptions**, click “New prescription”, then search for the patient and their consultation.
2. Click “Add a medication” for each line: medication name, dosage, frequency, duration, quantity, instructions (optional).
3. Click “Save” — the prescription can still be edited while it is a Draft.
4. When it is ready, click “Finalize (lock)” (you are asked to confirm) — it becomes final.

The “Download PDF” button opens the printable prescription at any time.

Draft → Finalized

A draft prescription can also be cancelled if it should not be issued after all.

- A prescription must contain at least one medication to be saved.
- A consultation can only have one prescription.
- Once finalized or cancelled, a prescription can no longer be edited — it can only be viewed or printed.

LABORATORY

Lab tests

The doctor orders the tests, the lab technician collects the samples and enters the results, then the doctor validates them. Patients only see their results after this validation.

Who can do what

ACTION	DOCTOR	LAB TECHNICIAN	ADMINISTRATOR	PATIENT
Order lab tests	**Yes**	—	—	—
See lab orders	**Their own**	**All**	**All**	**Their validated results**
Collect samples, enter results, attach a PDF	—	**Yes**	—	—
Validate results	**Ordering doctor**	—	—	—
Cancel an order (before collection)	**Ordering doctor**	—	**Yes**	—
Correct a validated result	—	**Yes (reason)**	—	—
Print the PDF report	**Yes**	—	**Yes**	**Yes**

Lab order lifecycle

Requested → Sample collected → In progress → Completed → Validated

An order still “Requested” (sample not yet collected) can also be **cancelled**.

Ordering lab tests (doctor)

1. Open **Laboratory** and click “New lab order”.
2. Search for the **patient**, link the **consultation** if needed, then choose one or more **lab tests** from the catalog.
3. Add **clinical information** useful to the laboratory (fasting, current treatment…), without a detailed diagnosis, then click “Send order”.

Lab technicians are notified immediately.

Processing an order (lab technician)

1. Open the order from **Laboratory** (use the "Status" filter to see orders to collect or in progress).
2. Click "Sample collected", then "Start analysis".
3. For each test, enter the **value** (in the unit shown) and a comment if needed, then "Save results". You can also **attach a PDF** (5 MB maximum), for example an analyser report.
4. When every test has a result, click "Complete": the ordering doctor is told the results are ready to validate.

> ⚠ A value outside the test's **reference range** is automatically flagged **"Out of range"** (in red, with the written label), and the ordering doctor immediately receives a critical notification.

Validating results (ordering doctor)

1. Open the completed order and review the results.
2. Click "Validate results" and confirm.

On validation: the results become **final** and visible to the patient in their portal ("My results"); the patient is notified by email, without the value in the message; a **draft invoice** is created with the tests, at the price in force when they were ordered. The PDF report can then be downloaded.

Correcting a validated result

The technician clicks "Correct" next to the test, enters the new value and the **reason** for the correction. The previous value is not erased: it stays visible under "Replaced values", and the correction is recorded in the audit log.

- Only the doctor who ordered the tests can validate them.
- An order can only be completed when every test has a result (value or PDF).
- A validated result is never edited: it is corrected, with a reason.
- Lab technicians never see the diagnosis, the consultation, prices or the invoice.
- Every view of a lab order and every print of the report is logged.

LABORATORY

The lab test catalog

Managed by the clinic administrator; doctors and lab technicians can view it.

1. Open **Lab test catalog** and click “New lab test”.
2. Enter the **code** (for example GLY), the **name**, the **price** and the **unit** (g/L, mmol/L…).
3. If needed, enter the lower and upper **reference range**: it is used to flag out-of-range results automatically.
4. Click “Save”.

- Two lab tests of the clinic cannot share the same code.
- The price cannot be negative, and the upper limit must be greater than or equal to the lower limit.
- A lab test is never deleted: it is archived (and can be restored). An archived test can no longer be ordered.
- Changing a price or reference range does not affect orders already placed.

HOSPITALIZATION

Hospitalization

Hospitalization tracks bed occupancy, patients' stays, their care and the billing of nights. Only a doctor admits a patient; doctors and nurses handle the follow-up.

Who can do what

ACTION	DOCTOR	NURSE	FRONT DESK	ACCOUNTANT	ADMINISTRATOR
See bed occupancy	Yes	Yes	Location	—	Yes
Admit a patient	Yes	—	—	—	—
Move a patient to another bed	Yes	Yes	—	—	—
Discharge a patient	Yes	—	—	—	—
Record vital signs and nursing notes	Yes	Yes	—	—	—
See the reason and the care	Yes	Yes	—	—	Yes
See nights and the invoice	Yes	—	—	Yes	Yes
Mark a bed as clean	—	Yes	—	—	Yes
Set up rooms, beds and rates	—	—	—	—	Yes

Bed occupancy

The **Hospitalization** screen shows four counters (Free, Occupied, Being cleaned, Out of service), then each department with its rooms and beds. An occupied bed shows the patient; clicking the name opens the stay. The “Department” filter narrows the view.

Free → Occupied → Being cleaned → Free

After a discharge or a bed change, the bed becomes **“Being cleaned”**: the nurse (or the administrator) clicks “Mark as clean” to free it. The administrator can put a free bed **out of service**, then back in service.

The front desk sees a patient's location (department, room, bed) to guide visitors, never the reason for the stay or the care.

Admitting a patient (doctor)

1. In **Hospitalization**, click "New admission".
2. Search for the **patient**, choose the **department** and enter the **reason for admission**.
3. Choose "**Admit now**" and a free bed in the department, or "**Plan**" with a planned date (the bed is chosen at admission).
4. Confirm: you become the stay's **attending doctor**, and the nurses are notified.

Planned → Admitted → Discharged

A planned stay that has not started can also be **cancelled**.

The stay record

From **Hospital stays** (or by clicking the patient on the bed occupancy screen), the record brings together:

DETAILS AND BED HISTORY

Patient, department, location, attending doctor, dates, reason, and every bed change with its reason. "Change bed" offers the free beds.

PATIENT FILE

Allergies and medical history, current prescriptions and validated lab results, read-only. Nurses can see it while the patient is admitted.

VITAL SIGNS

"Record vital signs": temperature, blood pressure, pulse, respiratory rate, oxygen saturation, weight, pain — fill in only what was measured. From two measurements on, **trend charts** appear (one per vital sign) above the table.

NURSING NOTES

Added throughout the stay, dated and signed. A note is never edited: a correction is written in a new note.

Discharging a patient (doctor)

1. On the stay record, click “Discharge”.
2. Write the **discharge summary**, then confirm.

On discharge: the bed becomes “Being cleaned”; the **nights** are counted (one night each time midnight passes) and added to a **draft invoice** for the patient; the front desk and accounting are notified. The **stay summary** can then be downloaded as a PDF.

- A bed holds only one admitted patient, and a patient has only one ongoing stay.
- The nightly rate must be set up (see below) before any admission, so the discharge, which bills the nights, can never be blocked.
- Vital signs outside plausible limits (for example a temperature above 45 °C) are rejected as data entry errors.
- Vital signs and notes can only be recorded during the stay; no stay, vital sign or note is ever deleted.
- A discharged stay never goes back to “Admitted”: a readmission is a new stay.

HOSPITALIZATION

Rooms, beds and nightly rates

Clinic administrator only.

---

1. Open **Rooms and beds**. “Room types” tab: create each type (Single, Double…) with its **rate per night**.
2. “Rooms” tab: create each room with its **number**, **department** and **type**.
3. “Beds” tab: add the beds of each room (label A, B, Window…).
4. In **Settings** → **Hospitalization**, choose the billing method: **flat rate** (the same rate for every room) or **rate per room type** (each night at the rate of the room occupied at midnight).

> A change of rate or method only applies to later discharges: nights already billed are never recalculated. Room types, rooms and beds are archived (never deleted); an occupied room or bed cannot be archived.

PHARMACY

Pharmacy and stock

The pharmacy holds your clinic's medication catalog and tracks stock batch by batch, with expiry dates. It is reserved for the pharmacist and the clinic administrator.

Who can do what

ACTION	PHARMACIST	ADMINISTRATOR	OTHER STAFF
Open the Pharmacy screen	Yes	Yes	No
Add or edit a medication	Yes	Yes	No
Receive a batch	Yes	Yes	No
Archive or restore a medication	Yes	Yes	No
Receive stock alerts	Yes	Yes	No

Adding a medication to the catalog

1. Open **Pharmacy** and click “New medication”.
2. Enter the **medication name**, its **base unit** (the smallest unit dispensed: tablet, capsule, vial…) and its **unit price**. If it is also sold by the box, fill in the “Packaging” section (see below).
3. If needed, set a **minimum threshold** (0 = no alert) and a **maximum threshold** (leave empty = no cap).
4. Click “Save”. The medication appears with a stock of 0: stock only increases when a batch is received.

- Two medications in the same clinic cannot have the same name (case is ignored: “Paracetamol” and “paracetamol” are the same product).
- The price and thresholds cannot be negative, and the maximum threshold must be greater than or equal to the minimum threshold.
- The displayed stock is never edited by hand: it is always the sum of the remaining quantities of all the medication's batches.

Receiving a batch (stock in)

Each delivery is recorded as a **batch**, so that the expiry of every shipment can be tracked.

1. In the **Pharmacy** list, click the "Receive a batch" icon next to the medication.
2. Enter the **batch number**, the **received date**, the **expiry date**, the **quantity received** (in boxes or units for a packaged medication) and the **cost** (the supplier is optional).
3. Click "Receive": the medication's current stock increases immediately by the quantity received.

Stock out: the invoice

Stock decreases when a medication is **billed to the patient**. In an invoice, choose the medication in the line's "Medication (optional)" field: the description and price are filled in from the catalog, and the available stock is displayed.

- Stock is only deducted when the invoice is **issued**, never while it is a draft.
- If stock is insufficient, issuing is refused with a message showing the missing quantity: the invoice stays in draft and the stock is not changed.
- Cancelling an issued invoice automatically puts the quantities back in stock; changing the quantities of an issued invoice adjusts the stock accordingly.

> When stock goes out, the batches with the **earliest expiry date** are always used first, to limit losses from expired products.

Scanning box barcodes

Each medication can carry its **box barcode** (the "Box barcode" field of the record). Scan it with the **camera** of the phone, tablet or computer, or with a **barcode scanner**; the code can also be typed in the scan window.

- **Find by scan** (medication list): opens the medication's record.
- **Receive by scan**: opens stock receiving. If the box has a **DataMatrix** square, the batch number and expiry date are filled in automatically — check them before confirming. The "Read the batch from the box" button does the same from a receiving form that is already open.
- **Scan a medication** (invoice): adds one box of the medication, or one more box if it is already on the invoice.
- Unknown code: a message appears; the pharmacist and the administrator can click "Create" to add the medication with this code.

> The first time, the browser or phone asks for permission to use the camera: allow it. A barcode can belong to only one medication in the clinic.

Monitoring stock levels

The list's **Status** column shows, for each medication:

Normal | Low stock: below the minimum threshold | Overstock: above the maximum threshold

When a medication drops below its minimum threshold or rises above its maximum threshold, the pharmacist and the clinic administrators receive an **email alert**. The alert is sent only once: it is not repeated on every movement while stock stays out of range, and it is re-armed as soon as stock is back within range.

Archiving or restoring a medication

A medication that is no longer used can be archived with the "Archive" icon. It stays visible in the list but becomes read-only: it can no longer be edited or receive batches. The "Restore" icon puts it back into service.

- No medication, batch or stock movement can be deleted: only archiving exists, so that the full history is kept.
- A batch's quantity received must be at least 1, and its cost cannot be negative.
- Every addition, change, archiving and batch receipt is recorded in the clinic's audit log.

Selling by the box or by the unit

A medication's stock is always counted in its **smallest unit** (tablet, capsule, bottle…). When it is also sold by the box, the box is only a conversion: “box of 50 tablets”. You can then receive and sell boxes as well as tablets, and the list shows the stock as **“9 × box + 47 × tablet”**.

1. **Medication**: in the “Packaging” section, enter the units per pack (e.g. 50), the pack name (box) and its price. The unit price is entered separately. Untick “Sale by the unit allowed” for a product only sold as a full box.
2. **Receiving**: choose “Received in” boxes or units; the conversion (“= 500 × tablet”) is shown below the quantity.
3. **Invoice**: after choosing the medication, choose “Sold per” box or unit. Price and description are filled in accordingly; 1 box takes 50 tablets out of stock, 3 tablets take 3.

Splitting the stock of a medication counted in boxes

A medication created with the unit “box” cannot be sold by the unit. To switch it to tablets, use the **“Split stock into units”** icon in the list: enter the units per box, the unit name (tablet…) and its price. The preview shows the conversion, for example “10 × box → 500 × tablet”.

- The medication's batches, movement history, alert thresholds and already issued invoices are converted: an old invoice cancelled later returns exactly what it took.
- The operation is reserved to the pharmacist and the administrator, is done once per medication and is recorded in the audit log.
- Changing the box size afterwards (e.g. 50 → 30) does not change the stock in units: only the display in boxes changes.

> Alert thresholds are expressed in the smallest unit (for example 100 tablets, i.e. 2 boxes of 50).

FINANCE

Billing

Receptionists can create an invoice; only accountants and administrators can then edit or issue it.

Creating an invoice

1. Open **Billing** and click "New invoice".
2. Search for the patient, optionally choose the associated doctor, and set the issue date.
3. Add one or more lines: description, quantity, unit price. For a medication dispensed by the pharmacy, choose it in "Medication (optional)": the description and price are filled in automatically. The subtotal, VAT and total are calculated automatically.
4. Click "Save", then "Issue" when the invoice is ready to be given to the patient.

Invoice lifecycle

Draft → Issued → Partially paid → Paid

An issued (unpaid) invoice can also be **cancelled** by the administrator; a paid invoice never can.

The switch to "Partially paid" or "Paid" happens automatically as soon as a payment is recorded against the invoice — see the Payments section below.

> ⚠ A paid invoice is permanently locked — it can no longer be edited or cancelled.

- Invoices can never be deleted — only cancelled, and only before they are fully paid.
- The selected patient and doctor must belong to your clinic.
- An invoice containing medications can only be issued if there is enough stock (see the Pharmacy section).

FINANCE

Payments

A payment is always recorded from the invoice it settles. Only accountants and administrators can record a payment; only administrators can refund one.

Recording a payment

1. Open the invoice from **Billing**.
2. In the “Payments” section of the invoice, enter the **amount**, the **method** (cash, mobile money or card) and the **date**.
3. Click “Record payment” — the invoice status updates automatically.

Refunding a payment

From the **Payments** list, the administrator clicks “Refund” next to a completed payment. The invoice status is recalculated automatically (it may go back to “Partially paid” or “Issued”, as the case may be).

A PDF receipt is available for every payment via “Download receipt”.

- A payment cannot exceed the balance due on the invoice.
- The amount must be positive, and the payment date cannot be earlier than the invoice's issue date.
- A refund always requires the administrator's approval — an accountant cannot refund a payment they recorded themselves.

FINANCE

The activity report

This report is reserved for the clinic administrator.

1. Open **Activity report** and choose a period with the “From” and “To” fields (the current month by default).
2. Click “Generate PDF” — the document opens in a new tab.

For the chosen period, the report lists the appointments and the consultations, with their respective totals — strictly limited to your clinic.

PATIENT PORTAL

What a patient sees

Patients have their own portal, completely separate from the staff area, where they only ever see their own information.

Activating the patient portal

No account is created in advance for a patient — they activate it themselves the first time, in two steps:

1. They choose their clinic from a list, then enter their **patient ID**, **phone** and **date of birth** — information the clinic already has.
2. A **verification code** is sent to them by email. They enter it, then choose their own username and password to complete the activation.

Once signed in, the patient can:

MY APPOINTMENTS

Book a new appointment, and cancel upcoming ones (more than 24 hours in advance).

MY MEDICAL RECORD

View their allergies, medical history and observations (read-only).

MY PRESCRIPTIONS

See the list and download each one as a PDF.

MY RESULTS

View their lab results once validated by their doctor: values, reference ranges and the “Out of range” flag, attached documents and the PDF report. A result that has not been validated never appears there.

MY INVOICES

Check the status of their invoices and download them as PDFs.

A patient can never access another patient's information, nor pay an invoice online — recording payments remains a task for the clinic's staff.

ADMINISTRATION

Staff

Clinic administrator only.

Adding a staff member

1. Open **Staff** and click "New member".
2. Choose their **role**: Receptionist, Accountant, Pharmacist, Nurse, Lab technician or Administrator.
3. Enter username, first name, last name, email and password, then click "Save".

Photo: add it at the top of the form; each member can also change it themselves with "My photo". The list shows the photo in the first column.

> Doctors are not created from this screen but from the "Doctors" page, which includes additional professional details (specialty, professional number...).

Changing a role, activating or deactivating an account

From a staff member's record, use "Change role" to give them another role (Receptionist, Accountant, Pharmacist, Nurse, Lab technician or Administrator), or "Deactivate" to temporarily block their access without erasing their history.

- You cannot deactivate your own account.
- A clinic's last active administrator can never be deactivated — a clinic must never be left without an administrator.

ADMINISTRATION

Your clinic's subscription

Clinic administrator only. This is what **your clinic pays to use the application** — it has nothing to do with billing your patients.

Plans

PLAN	MONTHLY	ANNUAL (3 MONTHS FREE)	INCLUDED
Starter	10,000 FCFA	90,000 FCFA	Up to 3 doctors and 500 patients; appointments and their emails, consultations, medical records, prescriptions, billing, visitor log
Professional	15,000 FCFA	135,000 FCFA	Up to 10 doctors and 5,000 patients; everything in Starter, plus inpatient care, laboratory, pharmacy and the automatic reminder the day before appointments

Subscribing

1. Open **Subscription** and choose "Monthly" or "Annual".
2. Click "Pay (Wave, Orange Money, card)": the secure payment page opens in a new tab (or in the phone's browser with the app). Choose your payment method and confirm on your phone. Payment fees are added to the plan price and shown before you confirm.
3. Go back to proCli, which stays open: the "Subscription" screen updates on its own as soon as the payment is confirmed. Your status changes to "Active" and a confirmation email is sent to the administrators. There is no need to wait for an automatic return from the payment page.

There is **no automatic debit**: each period (one month or one year) is paid in advance. The "Extend" button adds a period after the current one — paying early costs you nothing. Reminder emails are sent 7, 3 and 1 day(s) before the due date. After the due date, you have **3 days** to pay before the clinic becomes read-only.

To change plan (for example from Starter to Professional), pay for the new plan: a new period starts on the payment date and the remaining days of the previous plan are not refunded. Your payment history is shown at the bottom of the "Subscription" screen.

Paying during the free trial costs you nothing extra: **your paid period starts when the trial ends**.

If no plan has been chosen by the end of the 14-day trial, the clinic becomes **read-only** ("Suspended"): your data remains available, but nothing can be created or changed. The administrators are notified by email. Simply choose a plan to reactivate the account; no data is lost.

Managing an active subscription

The **Subscription** screen shows your current plan, its status (Trial, Active, Past due, Suspended or Cancelled) and, once a paid cycle is active, the next renewal date.

If the subscription is suspended (period not renewed 3 days after the due date), all of the clinic's administrators are notified by email. No new data can be created in the meantime, but all existing data remains available. Paying reactivates the account immediately.

ADMINISTRATION

The audit log

Clinic administrator only — a complete history of who did what, and when.

The log records, among other things, sign-ins and sign-outs, record creations and changes, medical record views, prescription and invoice printing, report exports, and any change to staff roles.

From **Audit log**, you can search by keyword and filter by action type and by period (“From” / “To”).

> The log is kept in full and can never be edited or deleted — so you can always answer the question “who did this?”.

ADMINISTRATION

Settings

Customize the application's appearance for your clinic.

LOGO

Four slots: light logo, dark logo, print logo (PDF documents) and browser tab icon — 2 MB maximum per image.

LANGUAGE

The application is available in English and French. Each user chooses their display language with the selector at the top of the screen. The **clinic language** (Settings) applies to emails, text messages and PDF documents (prescriptions, invoices, receipts…) sent to patients, whatever the language of the person printing them.

CURRENCY

The clinic's billing currency (CFA franc, euro, dollar…) applies to invoices, payments, receipts and pharmacy prices. A change only affects **new invoices**: existing invoices keep their original currency, with no conversion. The platform subscription is still billed in FCFA.

HOSPITALIZATION

Nightly billing: **flat rate** (amount per night) or **rate per room type** (amounts set in “Rooms and beds”). Only applies to later discharges.

THEME

Light, Dark, or System (follows your device settings).

ACCENT COLOR

Three palettes to choose from (Ocean blue, Deep teal, Sky blue), applied to the sidebar and headers — a personal preference, specific to each user.

USER GUIDE

The “Download the user guide” button (at the top of the Settings page, or in the menu under your name) lets you get the latest version of this guide at any time once signed in, in your display language (English or French). It is reserved for the clinic administrator.
